Know what's below! April is Safe Digging Month

Spring is here, and if warmer weather has inspired you to embark on landscaping projects, be sure to contact Georgia 811 before you dig to make sure your project doesn't interfere with underground electric, gas, water and sewer lines or telephone and cable wires. Cutting through these utilities can be dangerous—even deadly—and can cause service interruptions, environmental damage and legal problems.

Georgia's "Dig Law" requires that homeowners, landscapers and other professionals first contact Georgia 811 to have underground utility lines marked at least 48 hours before beginning any mechanized digging work. To comply, call 811 or visit Georgia811.com.

Georgia 811 notifies member utility companies so that technicians can mark the location of underground lines with colored paint or flags.

Starting Your Spring Gardening Soon?

Remember These Planting Tips!

HOME LIFE April is one of the busiest months for gardening, and it's also Safe Digging Month, which reminds us that it's important to know what lies underground before prepping the garden. Consider the following tips before you start digging:

- 1. Decide what and where you want to plant.** When considering placement, select a planting location that will not interfere with utility lines both in the air and underground. Tree branches can interfere with overhead power lines, and roots can do the same with underground utilities.
- 2. Call before you dig.** Once you have your planting area selected, make sure to call Georgia 811 before putting a shovel in the ground. The "Call Before You Dig" number is a free service

that locates and marks underground public utilities. Call at least three days in advance of when you want to dig to provide enough time for a professional to locate underground utilities such as electrical, gas, water, cable and telephone.

- 3. Check the weather forecast before working outdoors.**

If it's raining or the ground is wet, do not use electric power or yard tools. You should always store power tools and extension cords in dry areas. Replace any that have been damaged by water. **L**

April Is National Safe Digging Month

Commission Reminds Georgians to Stay Safe by Calling 811 before Digging

The Georgia Public Service Commission reminds all Georgians that April is National Safe Digging Month. The law requires anyone who plans to excavate where underground utilities are located to call 8-1-1 before they dig. The process is simple and can prevent major damage that can endanger and inconvenience our communities and cause economic disruption. Damage from excavation activities to gas and water pipelines, along with sewer systems and buried distribution power lines, remains a leading cause of utility incidents resulting in death or injury.

Commission Chairman Chuck Eaton said, "We are pleased to work together with Georgia 811, our federal partners, and the National Association of Regulatory Utility Commissioners (NARUC) to prevent damages from occurring to the state's underground utility facilities. Our common goals are to prevent the disruption of utility services and personal injuries that result from accidents which damage underground facilities."

The Georgia Public Service Commission is charged with the enforcement of the state's underground utilities damage prevention programs as a result of state legislation approved in 2000.

The Commission also enforces federal pipeline safety standards under an agreement with the Pipeline and Hazardous Materials Safety Administration. The Commission's program is rated one of the top five in the nation and serves as a model for other states to follow in reducing damages to underground utilities.

Using these programs, the Commission provides training and education for excavators and utilities in order to avoid accidents that can cause expensive and often dangerous damage to buried utilities. The Commission also works closely with Georgia 811, Inc. which accepts calls from the national federally mandated "Call before You Dig" Number 8-1-1. This "one call" system is free to contractors and excavators as well as homeowners and helps all excavators comply with the law.

Commission Vice-chair Lauren "Bubba" McDonald said, "I want to remind anyone who excavates to call before you dig by placing a call to 8-1-1. It's free and it's the law. A simple phone call can prevent the disruptions and economic losses that can occur when underground utilities are damaged."

"Calling 8-1-1 is the best way to prevent damage to our under-

ground utilities," said Commissioner Stan Wise, "Everyone loses when underground utilities are damaged."

Commissioner Doug Everett added, "Calling before you dig is the right thing to do. Just one phone call can prevent untold damage to our underground utilities that can cause economic loss, traffic disruption and even loss of life."

"Excavators are only as good as the marks on the ground," said Commissioner Tim Echols. "That is why calling before you dig is so important."

"Always contact Georgia 811 before every digging project, every time. All digging projects need to be done safely, including projects like installing a mailbox, landscaping or fence installation. Log on to Georgia811.com or simply dial 811. It not only saves lives, but money and time. If you have dug in the past without calling, don't make that mistake again. The call is free and having the underground utilities marked is free," Shares Georgia 811's President and CEO, Claudette Campbell.

The public, excavators and others can find resources available at www.call811.com and at www.Georgia811.com.

The Georgia Public Service

Commission is a five-member constitutional agency that exercises its authority and influence to ensure that consumers receive safe, reliable, and reasonably-priced telecommunications, electric and natural gas service from financially viable and technically competent companies. For more information on the Commission visit our web site at www.psc.state.ga.us.

“Request for Proposals”

Contact us City of Johns Creek Request for Proposals Utility Locating & Marking Services Posted Tuesday, January 5, 2016 10:44 am Comment The City of Johns Creek is accepting sealed Request for Proposals (RFP) from qualified firms to perform all aspects of GA 811 ticket processing, underground utility locating and marking. Sealed RFP's will be received no later than 2:00 P.M. on January 29, 2016 in the City of Johns Creek Purchasing Office, 12000 Findley Rd., Suite-400, Johns Creek, Georgia, 30097. RFP's received after the above time or in any other location other than the Purchasing Office will not be accepted. A Pre-Bid Conference will be held on January 19, 2016 at 10:00AM at the City Hall location Chattahoochee Conference Room. RFP packages are available on the City of Johns Creek website (www.johnscreekga.gov). Additional information may be obtained by contacting the Purchasing Office at (678) 512-3233. RFP's shall be presented in a sealed opaque envelope with the RFP number and name clearly marked on the outside of the envelope. The name of the company or firm submitting an RFP response should also be clearly marked on the outside of the envelope. FIVE (5) ORIGINALS AND ONE (1) COPY OF THE RFP ON CD MUST BE SUBMITTED. RFP submittals will not be accepted verbally or by fax or email. All offerors must comply with all general and special requirements of the RFP information and instructions enclosed herein. The City of Johns Creek reserves the right to reject any or all bids and to waive technicalities and informalities, and to make award in the best interest of the City of Johns Creek.

Starting a spring digging project? Call 8-1-1 to avoid damaging underground utility lines

Staff Reports

ATLANTA – Spring marks the traditional start of digging season, when people head outside to start outdoor projects they had been waiting to tackle all winter. Atlanta Gas Light wants to remind homeowners and contractors that the digging season also increases their chances of damaging underground utility lines, including natural gas, if they do not take the necessary step of calling 8-1-1 before digging.

When making the free call to 8-1-1, homeowners and contractors are connected to Georgia 811, which notifies the appropriate utility companies of the requestors' intent to dig. Professional locators are then sent to the requested digging site to mark the approximate horizontal locations of under-

ground lines with flags or spray paint. Once lines have been accurately marked, digging can begin. Georgia 811 neither owns nor marks any underground utilities.

To build awareness about protecting underground utilities and help ensure the safety and the continuity of critical services, Atlanta Gas Light is providing homeowners and contractors with the following safe digging guidelines:

- **Call 8-1-1 Before You Dig:** When starting an outdoor project involving digging, customers are advised to make contacting 8-1-1 or 1-800-282-7411 as part of their plans. Calls to the free locating service can be made up to 10 working days in advance of any digging projects. The requests to have public utility operators mark underground facilities,

including natural gas, electric, water, sewer, telephone and cable lines, can be made 24-hours a day, seven days a week.

- **Allow the Required Time for Marking:** Before doing any digging, customers are urged to call 8-1-1 and wait the required time to have underground utility lines marked. The approximate location of underground utility lines will be marked with color-coded spray paint, flags or stakes that correspond to the utility. The color used for natural gas is yellow.

- **Respect the Marks:** Once the lines are marked, use the appropriate digging methods, which may include handtools. Appropriate digging depths may vary depending on the nature of the project.

- **Excavate Carefully:** Make sure the marks remain visible during

the project. If they are illegible or removed, customers are encouraged to call 8-1-1 to have the lines re-marked. If a natural gas line is accidentally damaged or the distinct odor of gas is present, call 1-877-427-4321 from a safe location. Do not operate any machinery or any equipment that might cause a spark.

For information about natural gas safety, visit www.atlantagaslight.com/safety.

LOCAL: (706) 278-1313

Natural gas is a safe and efficient form of energy. In its natural state, natural gas has no smell and is not visible to the naked eye. A chemical called mercaptin is added to natural gas to make customers aware if there is a leak. Most accidents occur because of lack of knowledge that leads to unsafe equipment or appliance use, not because natural gas itself is unsafe. Some of the potential hazards of an unintended release of natural gas include fire, explosion, property damage and asphyxiation.

Dalton Utilities protects the natural gas system through active participation in the One Call System or Dig Safely Program, strategically placed pipeline markers and signage, pipeline integrity management program, Emergency Response Plan, patrolling of the pipeline, and routine inspections of the pipeline.

Please be aware that natural gas lines may be located on or near your property. Always call 8-1-1 before you dig!

One free easy call to 8-1-1 gets your utility lines marked AND helps protect you from injury and expense. Safe Digging Is No Accident: Always Call 8-1-1 Before You Dig! Visit call811.com for more information.

IMPORTANT SAFETY INFORMATION FROM ATLANTA GAS LIGHT

Every day, underground pipelines safely transport natural gas to homes and businesses throughout the area.

Atlanta Gas Light is responsible for the security and maintenance of pipelines in our service territory.

Natural gas is colorless and odorless so we add an odorant with a distinctive, rotten-egg type scent for easy detection. It is non-toxic, lighter than air and displaces oxygen. In severe cases, if not used properly, it may lead to asphyxiation and has a risk of ignition near a spark.

CALL BEFORE YOU DIG

Before digging around your property, state law requires you call **811** to have your utility lines professionally marked – for free! You must wait the required amount of time before you begin your project.

Pipeline markers indicate the presence of pipe and right-of-way. While they're not present in all areas, it's always best to call **811**. If right-of-way is adjacent to your property, it is your responsibility to ensure no new landscaping or physical structure interferes with access to the pipeline, and with our ability to keep it safe through routine monitoring and maintenance.

Information about transmission pipelines operating in your community is available through the **National Pipeline Mapping System (NPMS)** and is available online at npms.phmsa.dot.gov.

WATER HEATER SAFETY

The U.S. Consumer Product Safety Commission urges all users to lower their water heaters to 120 degrees Fahrenheit.

CARBON MONOXIDE

Incomplete combustion of any fuel – produces carbon monoxide. Carbon monoxide is poisonous and has no odor, taste or color. Carbon monoxide detectors are helpful, but they are no substitute for using equipment safely. This includes having it inspected once a year by a certified contractor.

APPLIANCE SAFETY

According to the Federal Emergency Management Agency:

- It's important that you have your furnace inspected by a qualified specialist.
- Be sure all furnace controls and emergency shutoffs are in proper working condition.
- Keep trash and other combustible material away from your air heating and water heating systems.

IF YOU SMELL GAS, ACT FAST

Natural gas pipeline incidents are uncommon, these steps help you identify a possible leak and know what to do.

• Look for signs such as blowing dirt, discolored vegetation or continued pooling of standing water.

• If you hear a roaring sound near a natural gas appliance or line; there may be a gas leak. Stop using the appliance and call for help.

• If you smell a distinctive, rotten egg odor associated with natural gas, it is a warning. Natural gas is colorless and odorless so we add an odorant with this scent for easy detection. You should take immediate action when you detect even a small amount of this odor.

• Do not create anything that may cause a spark. This includes starting a car engine or using cell phones, lighters, cigarettes, light switches or landlines. Natural gas is lighter than air and displaces oxygen. Keep ignition sources away from natural gas can burn near a spark, possibly causing a fire or explosion. In severe cases, if not used properly, it can also lead to asphyxiation.

LEAVE the area **IMMEDIATELY** if you detect a natural gas leak. Don't try to identify the source or stop the leak.

CALL Atlanta Gas Light at **877.427.4321** or **911** once you are safely away from the possible leak site. Stay away from the area until an Atlanta Gas Light representative or emergency personnel indicate it is safe to return.

Note: Always leave if you suspect a leak. Do not solely rely on sense of smell. Be aware that some persons may not be able to detect the odorant because they have a diminished sense of smell, olfactory fatigue, or because the odor is being masked by other odors in the area. Certain conditions may cause the odorant to diminish so that it is not detectable.

How to Stay Safe When Digging on Your Property

Jul 19, 2016 Comments

(StatePoint) Whether you are a “do-it-yourself” homeowner or a contracted professional, before starting landscaping or home improvement projects, it is essential to protect yourself and stay safe when digging.

Most people are surprised to learn that there are more than 100 billion feet of underground utilities in the U.S. This equates to more than one football field’s length of buried utilities for every man, woman and child in the country, according to the Common Ground Alliance, an organization dedicated to protecting the safety of people who dig near underground utility lines.

Every six minutes in the U.S., an underground utility line is damaged because someone did not call 811, the national “Call Before You Dig” phone number, or connect online at www.call811.com.

Each year, August 11 (8/11) is a reminder to dig safely and lawfully. It’s important to dial 811 or connect online to have the approximate location of underground utilities and pipelines marked.

whether you’re installing a fence, deck or swimming pool; planting a tree; or beginning any excavation project at home or on your property.

Protect yourself and those around you from injury by contacting 811. Not only is it the law, but knowing where pipelines and underground utility lines are buried prevents unintentional damage, service interruptions, potential fines and costly repairs.

You must contact 811 every time, even if you have done so previously for a similar project, as the depth of utilities can vary, and there may be multiple utilities located in the same area.

Continued on next page

Contacting 811

When you contact 811, information will be collected about your digging plans, and local pipeline and utility companies will be notified about your project. Representatives will be sent to mark the approximate location of underground utilities using color-coded paint, flags or stakes. If there are no underground utilities in the area, they will mark “clear.”

The advance notice required to have underground utilities marked varies by state, although most require 48 to 72 hours (excluding weekends, holidays and the day the call was made). You can find state-specific information or place an online request to have utilities marked at www.call811.com.

Project Planning

- Regardless of the depth of your digging or your familiarity with the property, always contact 811 before starting a project that involves digging.
- If a contractor has been hired, confirm they have done so. Don't allow work to start until all utilities have been marked.
- After you have waited the required time for markings, if utilities have not been marked, you must contact 811 again to check the status of your request before digging. Also confirm whether the markings have an expiration date and when they will need to be re-marked.
- If your project is located near the paint, flags or stakes, contact the underground operator for the specific steps you should take.

Protect your safety, the safety of the community and the environment by digging with care.

Marking utilities costs Gwinnett County \$1 million annually

Karen Huppertz - For the AJC

Updated 12:33 p.m Tuesday, Feb. 9, 2016 | Filed in [Metro Atlanta](#) / [State news](#)

Planning to do a little landscaping? Need your utilities marked before construction begins? The county is required by law to provide free utility locating services. Gwinnett commissioners on Feb. 2 approved an annual contract for \$994,380 to low bidder, HighTech Engineering Inc. to provide these locating services.

This is an operational contract that ensures compliance with the Public Service Commission's enforcement of the Georgia Utility Facility Protection Act. This contract provides 24 hour, 7 day per week utility locating services. The contractor determines the correct response to each ticket and when required, locates and marks each water, sewer and fiber utility.

The contractor is responsible for late fees, damage fees and fines imposed by the Public Service Commission and any repair cost due to mismarked or non-located utilities.

By law, everyone, including homeowners, must contact Georgia 811 at 811 or 1-800-811-8111 at least 48 hours before beginning any mechanized digging.

NATURAL GAS CUSTOMERS

If You Ever Smell Gas Call Us Immediately at 706-213-3278
Elberton Natural Gas Division

Natural Gas is odorless in its natural state; therefore, a chemical is added which allows you to smell it. Gas leakage may occur from faulty appliances, loose connections, service lines inside or outside of your home, or from gas mains. Leaks can be dangerous, and should be dealt with promptly by people who are trained in this field.

If you ever smell gas, even if you don't use it in your home, take these precautions promptly. You may also hear a hissing noise coming from gas lines going to appliances or near gas meters.

1. Call Elberton Natural Gas Division at 706-213-3278 immediately or in an emergency call 9-1-1.
2. If odor is very strong and you are indoors, open windows and doors to ventilate. Go outside. Call us from a neighbor's house.
3. DO NOT TURN ANY ELECTRICAL SWITCHES ON OR OFF, OR USE THE TELEPHONE. LEAVE IMMEDIATELY AND DO NOT RE-ENTER UNTIL NOTIFIED BY GAS DEPARTMENT PERSONNEL THAT EVERYTHING IS OK.
4. DO NOT light matches, smoke cigarettes, or create any other source of combustion.

**HOWEVER SLIM THE CHANCES,
IT DOESN'T PAY TO TAKE CHANCES.**

City of Lawrenceville supports National Safe Digging Month

The City of Lawrenceville celebrated [National](#) Safe Digging Month throughout the month of April.

Lawrenceville is a member of the Gwinnett County and Walton County Utility Coordinating Councils (UCC) in which they partnered with Georgia 811 for the past four years to [support](#) a safe digging initiative.

The initiative's purpose is to remind citizens of Lawrenceville to notify operators when they decide to dig with hopes to prevent damage to underground facilities and to maintain safety among all Lawrenceville residents.

“Locating underground utilities is a process that requires skill, determination, workload management and problem-solving techniques,” said Damage Prevention Specialist for the City of Lawrenceville Wesley Huggins. “We have a wonderful team of individuals who work diligently and are happy to educate homeowners and citizens on appropriate digging practices.”

FITZGERALD UTILITIES

Natural gas, America's most popular home heating fuel, is increasingly popular for use by homeowners, schools, businesses, factories and electric power-generation plants because it is efficient, clean, reliable and a relative bargain compared to alternative energy sources.

In our community, *Fitzgerald Utilities* provides natural gas to more than 2,000 customers through a network of underground distribution lines. Main gas lines, typically 2-inch in diameter, branch into household service lines which are typically half-inch to three-quarter-inch in diameter and buried 12- to 18-inches below the surface. The service lines end at each customer's meter where gas is delivered.

To protect you and others in the community; federal and state government, along with your utility provider have made your safety a high priority. Any time you dig or move earth in any way, you are required to "Call Before You Dig" 48 hours before beginning any digging. When you call 811, they will contact utility owners who will locate all buried utility lines on your property, so you can safely dig and prevent a potentially hazardous condition. Failure to use the 811 system is a known cause of pipeline accidents. Calling before you dig can prevent a costly or even deadly mistake.

**Know what's below.
Call before you dig.**

Natural gas is a colorless, odorless gas; however, a chemical that smells like rotten eggs is added to help detect a possible leak. Some of the signs of a gas leak include seeing bubbling water, hearing a hissing or blowing sound from a pipeline or appliance, dead or discolored vegetation in an otherwise green area, or dirt or dust blowing from the ground, or the smell of rotten eggs.

If you smell gas, or just think you might have a gas leak, leave the area immediately and call *Fitzgerald Utilities* at 229-426-5400 or 911 from a neighboring home or business. Never turn on or off switches, open or close garage doors, use a flashlight or phone/cellphone in the presence of the gas smell, as these devices may be a source of ignition, causing an explosion.

Do your part to familiarize yourself and your family with these natural gas safety tips and continue to enjoy the value, comfort and benefits of America's cleanest, most efficient energy source!

This message is brought to you by *Fitzgerald Utilities* as a public service. For additional information regarding this message, please call 229-426-5400.

Damage Prevention / One Call

The Georgia Dig Law requires both professional excavators and homeowners to have utility lines marked before performing any mechanized digging, demolition, or working within 10 feet of overhead power lines. Call **811** even if you plan to manually dig. By knowing where underground utility lines are buried before digging will help protect you from injury and/or expense.

Calling the Utilities Protection Center before digging is a service free of charge. Call at least 48 hours, but no more than 10 working days, excluding weekends and legal holidays, before starting your digging project. Calling **811** starts the process to get your underground utility lines marked.

The single greatest cause of accidents regarding natural gas pipelines is digging by third party excavators. Third Party refers to those other than the pipeline operator. Please report any suspected signs of damage to our pipeline. If you strike a natural gas pipeline, please immediately notify us even if the damage seems to be minor, such as a scrape or dent.

Safety is for everyone. Please watch for markers indicating where natural gas pipelines are located and always:

How to Stay Safe When Digging on Your Property

Whether you are a “do-it-yourself” homeowner or a contracted professional, before starting landscaping or home improvement projects, it is essential to protect yourself and stay safe when digging.

Most people are surprised to learn that there are more than 100 billion feet of underground utilities in the U.S. This equates to more than one football field’s length of buried utilities for every man, woman and child in the country, according to the Common Ground Alliance, an organization dedicated to protecting the safety of people who dig near underground utility lines.

Every six minutes in the U.S., an underground utility line is damaged because someone did not call 811, the national “Call Before You Dig” phone number, or connect online at www.call811.com.

Each year, August 11 (8/11) is a reminder to dig safely and lawfully. It’s important to dial 811 or connect online to have the approximate location of underground

utilities and pipelines marked, whether you’re installing a fence, deck or swimming pool; planting a tree; or beginning any excavation project at home or on your property.

Protect yourself and those around you from injury by contacting 811. Not only is it the law, but knowing where pipelines and underground utility lines are buried prevents unintentional damage, service interruptions, potential fines and costly repairs.

You must contact 811 every time, even if you have done so previously for a similar project, as the depth of utilities can vary, and there may be multiple utilities located in the same area.

Contacting 811

When you contact 811, information will be collected about your digging plans, and local pipeline and utility companies will be notified about your project. Representatives will be sent to mark the approximate location of underground

utilities using color-coded paint, flags or stakes. If there are no underground utilities in the area, they will mark “clear.”

The advance notice required to have underground utilities marked varies by state, although most require 48 to 72 hours (excluding weekends, holidays and the day the call was made). You can find state-specific information or place an online request to have utilities marked at www.call811.com.

Project Planning

- Regardless of the depth of your digging or your familiarity with the property, always contact 811 before starting a project that involves digging.
- If a contractor has been hired, confirm they have done so. Don’t allow work to start until all utilities have been marked.
- After you have waited the required time for markings, if utilities have not been

marked, you must contact 811 again to check the status of your request before digging. Also confirm whether the markings have an expiration date and when they will need to be re-marked.

- If your project is located near the paint, flags or stakes, contact the underground operator for the specific steps you should take.

Protect your safety, the safety of the community and the environment by digging with care.

EDITOR'S PICK

City workers receive state awards

Staff report Dec 16, 2016

THOMASVILLE — City of Thomasville Utilities' Water Construction Team members received statewide attention when they were presented with the Golden Backhoe Award and the Lester E. Feathers Damage Prevention Award by the Georgia Utilities Coordination Council at their recent annual fall conference.

Each year, the GUCC selects one utility from within each of its seven districts that has demonstrated a commitment to safe digging practices as the recipient of the Golden Backhoe Award. Additionally, one team who has gone above and beyond in their commitment to safety is presented with the Lester E. Feathers Award.

The City of Thomasville Utilities Water Construction Team has been recognized for their attention to safety by the GUCC before, winning the Region 4 Golden Backhoe Award for 11 years straight and the Lester E. Feathers Award a total of eight times.

"It's an honor to have earned this distinction once again," said Water Superintendent Stacey Thomas. "To be selected for these accolades year after year is a testament to the commitment to safety and excellence by our staff."

Continued on next page

Thomasville Times-Enterprise

David Doler, utility locate supervisor, and Chuck Whitaker, natural gas superintendent, also were recognized. Doler and Whitaker were named recipients of the Georgia 811 U Damage Prevention Award for Outstanding Public Awareness in the Utility Field.

Every year, utility providers from each district submit award nominations to the GUCC Safety Committee, who then selects award recipients based on many factors, including safety record, total damages and many other work-related criteria.

"I'm very proud to see our team members recognized for our attention to safety and damage prevention," said Director of Utility Operations Bill Gerber. "Receiving recognition by the GUCC validates the work our team accomplishes for our community. It is an honor to work with such a great team."

Photo courtesy of City of Thomasville Chuck Whitaker (left) and David Doler were recognized for Outstanding Public Awareness by the GUCC.

City of Sugar Hill (Gas Bill Insert)

**Damage Prevention
Prior to Excavating**
Sugar Hill

Please Read Below

There are thousands of dig-in damage incidents in the United States every year. Striking an underground pipeline may lead to expensive fines, serious injury or death. Gas pipelines are built with safety and reliability as top priorities. However, a natural gas leak may result in fire, explosion, and/or asphyxiation. Natural gas is a colorless, odorless gas; however, a chemical that smells like rotten eggs is added to help detect a possible leak. It's a bad smell that's good!

Some of the signs of a gas leak include seeing bubbling water, hearing a hissing or blowing sound from a pipeline or appliance, dead or discolored vegetation in an otherwise green area, or dirt or dust blowing from the ground, or the smell of rotten eggs.

If you smell gas, or just think you might be smelling gas:

- **Leave** the area immediately
- **Call** your local gas provider at 770-271-2137 or 911 from a neighboring home or business.
- **Never** turn on or off switches or use a flashlight or phone in the presence of the gas smell, because an electric spark could ignite the gas, causing an explosion.
- **Stay** in a safe location until the Emergency Responder arrives and gives you clearance to return to the area.

Here are five easy steps to damage prevention:

1. **Survey and Mark** - Survey the proposed excavation area and mark the dig sites in white paint.
2. **Call Before You Dig** - 48 hours prior to digging, call 811 and get free staking of underground utility lines which helps reduce the chance of injury and unneeded expense.
3. **Wait!** Wait the required time to allow utility owners to locate and mark the lines.
4. **Respect the Marks!** Maintain visibility of the marks and safely follow them when digging.
5. **Dig** - Dig with care. Hand excavate within 24-inches of each side of the lines. If you plan to dig anywhere near a marked area - especially when using power equipment - use a shovel and carefully hand dig to expose the lines.

If your equipment contacts a gas line:

- **Leave equipment;** jumping clear and shuffling away, without turning off engines or generators.
- **Warn others and leave the area** quickly.
- **Do not operate** any gas pipeline valves or stop the flow of gas.
- **Leave the excavation open.**
- In a natural gas emergency, **call 911**, then City of Sugar Hill Gas, **770-271-2137**.

Over the past 20 years, risk exposure has been rising through increased populations, energy consumption and pipeline miles. At the same time, the number of serious pipeline accidents involving death or injury has declined by 50%.

To learn more about our natural gas service and the benefits of natural gas, call 770-271-2137.

Follow These Guidelines to Prevent Damage While Working Near Natural Gas Pipelines

**Importante acerca de la
Prevención de Daños antes
de Excavar**
Sugar Hill

Hay miles de incidentes al hacer excavaciones en los E.E.U.U. Golpear líneas subterráneas de petróleo o gas puede causar multas caras, heridas serias, o muerte. Las líneas de gas están construidas teniendo total la seguridad y la confiabilidad; sin embargo, una fuga de gas natural puede resultar en incendios, explosión, o incluso causar asfixia a las personas. El gas natural no tiene color ni olor, sin embargo, al gas se le agrega una fuerza para detectar posibles fugas. Es un mal olor pero ayuda mucho!

Las señales de una fuga de gas pueden ser: ver agua burbujando, oír silbido o un soplo proveniente de una línea que funciona con gas, ver vegetación muerta o descolorida, escuchar un soplo de polvo proveniente de la tierra un mal olor como de huevos podridos.

• o si piensa que hay una posibilidad de que este oliendo a gas:
no inmediatamente,
proveedor de gas local al 770-271-2137 o al 911.
El equipo, la luz ni use teléfonos mientras sienta el olor, porque una chispa eléctrica puede causar un incendio.
• un sitio seguro hasta que el personal de emergencia llegue y le dé permiso para regresar al área.

Las recomendaciones para prevenir daños:
Le y Marque - Examine el área de excavación propuesta y marque el sitio de excavación con pintura blanca.
Antes de Excavar - 48 horas antes de excavar, llame al 811 y los localizadores marcarán las líneas subterráneas para ayudar a reducir la posibilidad de accidentes y costos innecesarios. Este servicio es gratis.
• Espere el tiempo requerido para permitir que los dueños de las líneas subterráneas localicen y marquen las líneas.
Respete las Marcas! Mantenga las marcas visibles y sigalas cuando está excavando.
• Excave con cuidado. Excave únicamente con herramientas de mano cuando este a 24 pulgadas o menos de una línea. Si está planeando excavar dentro de un área marcada, especialmente usando equipo mecanizado, use una excavadora con herramientas de mano al sacar las líneas.

Si su equipo toca una línea de gas:
• (Si el equipo, salte a la tierra y camine arrastrando los pies, sin apagar motores o generadores.
• No se acerque ni toque el área rápidamente.
• No toque ninguna válvula ni intente el flujo del gas.
• Mantenga la excavación abierta.
• En una emergencia de gas natural, llame al 911 primero, y después a la Ciudad de Sugar Hill.
• Los últimos 20 años, el riesgo de explosión se ha elevado debido al aumento tanto de la población como del uso de las líneas de gas. Al mismo tiempo, el número de incidentes serios de líneas de gas que incluyen muertes o heridas graves ha disminuido en 50%.
• Más información acerca de nuestro servicio y los beneficios de gas natural, llame al 770-271-2137.
• Las recomendaciones para prevenir daños cuando está trabajando cerca de líneas de gas natural.

Georgia Tech Athletic Association

December 13, 2016

Ms. Meghan Wade
Georgia 811
3400 Summit Ridge Parkway
Duluth, GA 30096

Dear Ms. Meghan Wade,

Thank you for your support of Georgia Tech Cheerleading. Your sponsorship for \$1,000, received July 2016, provides our program tremendous opportunity.

Our program thrives on the support of our generous sponsors. Through your support, we are able to attend pre-season camp to prepare for football and basketball season, purchase gear and equipment, and send the student-athlete you have sponsored to NCA College Nationals in Daytona, Florida. This opportunity to compete against other collegiate programs enhances our presence nation-wide and aids in recruiting the most talented and best ambassadors for Georgia Tech Athletics for future seasons.

Your sponsorship helps us accomplish our goals and directly impacts the lives of our student-athletes, and we are proud to present your logo on our official Georgia Tech Cheerleading calendar. Your contribution is 80% tax deductible.

Thank you again for your support and please let me know if there is anything I can do for you in the future. Go Jackets!

The YMCA

October 17, 2016

Georgia 811
ATTN: Meghan Wade
3400 Summit Ridge Pkwy
Duluth, GA 30096

Dear Meghan Wade,

You are helping to change lives! Thank you for your gift of **\$250.00**.

By supporting the YMCA, you help guarantee that everyone, regardless of their circumstances or ability to pay, can benefit from the Y's values-centered programs. We unite volunteers, donors and participants as we build and harness the strengths of each child, family and individual in our community.

Now more than ever, children and families need the Y's innovative programs and services. This year, we have two funding priorities:

- Academic and Life Achievement for Youth
 - Through our Summer Day Camp and After School programs, we are helping kids retain what they've learned in school and providing additional enrichment activities to help each child reach their potential.
- Making Kids of All Ages Safe in the Water
 - Through our Learn to Swim and "Go For Green" programs, we are reducing the risk of childhood drownings in our community (our area has one of the highest death rates in the state of GA).

The Y is, and always will be, committed to building healthy, confident, connected and active children, adults, seniors, and families. Your gift to the Y strengthens our community and makes a difference in the life of each individual we serve. Thank you for a better you; for a better community; for a better country – **for a better us**.

Google Fiber contractor connected to several line breaks

by: Carl Willis Updated: May 21, 2016 - 3:12 PM

Google Fiber contractor connected to several line breaks

By Carl Willis

Channel 2 Action News is investigating a common connection among recent gas-line breaks. Channel 2's Carl Willis has learned crews hired by Google Fiber have been accidentally cutting the lines. Google told Willis they call 811 before digging but say sometimes the lines aren't marked. Atlanta Gas Light said this kind of damage is way up this year. Construction crews are digging in at an increasing rate, but they're also hitting more gas and water lines. "You just wish they would take the time and the effort to make sure it's done right and there's no issues," Atlanta resident Keith Bahun said. One of the common sights Channel 2 has seen at recent gas line breaks is the contractor being used to install Google Fiber in metro Atlanta. To date we've confirmed crews installing fiber hit lines on: Johnson Ferry Road in DeKalb County Woodward Avenue near Boulevard in Atlanta Peachtree and 17th streets Roswell Road and South Andrews. So far, no one has been hurt. "You never know. That one caveat might go bad one time, and then it might cause a big disruption than ever," said resident Sokish Sand. Atlanta Gas Light told Willis the surge in damage to their natural gas lines is due to an uptick in construction projects. In the first quarter they saw a 21 percent increase in locate requests prior to digs. In that time they also saw a 67 percent increase in natural gas line damage across the state caused by third parties. A Google Fiber spokesperson responded to Willis' request to find out what's going on. In a statement they wrote: "As we build a new fiber network for Atlanta, we're also working hard to minimize disruption. That means ensuring that our contractors perform within industry standards, and resolving issues as quickly and safely as possible." Google Fiber's contractor isn't alone but they are hitting plenty of lines. Still, residents remain hopeful about the finished project. "Especially with the amount of people that are here, the amount of business," Sands said. Google said the average internet speed is 14 megabytes a second. Google Fiber will be 1,000 a second. They say that will be groundbreaking. Some residents told Willis they want crews to be more careful breaking ground.

Metro Atlanta Gas Leaks Linked to Splurge in Construction

Posted: Apr 07, 2016 10:53 PM GMT
Updated: Apr 07, 2016 10:53 PM GMT

By Natalie Rubino **CONNECT**

ATLANTA (CBS46) - CBS 46 is looking into the increase of cut gas lines in metro Atlanta. In the past week alone there have been at least three gas leaks.

The latest incident happened on Sydney Marcus Blvd. Construction crews hit the wrong line while digging. The busy street was shut down for hours.

"It was like around 11 o'clock and there was a strong odor of gas. It filled up the whole block," Quantae Choetas a stylist at a nearby barber shop said. "I was like I hope I don't blow up."

Fire crews quickly responded.

"They had like this gas tester and they came through the barber shop and let us know it was safe to be in there," Choetas said.

The Georgia Public Service Commission is in charge of investigating when gas lines are cut. Bill Edge, a spokesperson for the commission say they get about 4,000 incidents reported to them each year. Under state law the commission can fine contractors up to \$10,000 for each violation.

People have to follow several rules when digging. The most important thing to do is to call 811 three days before you dig.

"Usually on a first or second time violation we'll have them go to training and waive the fine," Edge said.

Atlanta Gas Light responds to the leaks. They say the spike in gas leaks have to do with Atlanta's constant construction.

"Atlanta Gas Light has seen an increase in damage to its natural gas lines due to the surge in construction projects throughout Atlanta. Atlanta Gas Light works with contractors and residents to inform them about Georgia's Dig Law to minimize damage to underground facilities, including natural gas lines. The Dig Law requires contractors and residents to call Georgia 811 before starting projects that require digging," Kristie Benson, a spokesperson for the company said.

Construction workers at Wednesday's leak told CBS46 a Google Fiber contractor hit the gas line. Investigators have not yet determined who caused the incident.

People have to follow several rules when digging. The most important thing to do is to call 811 three days before you dig.

Cost of progress, or unnecessary evil?: PSC to dig into damage blamed on comm. companies

By WGCL Digital Team

Georgia's Public Safety Commissioner has asked utility and communications companies like Google and AT&T to answer for gas line breaks and other costs of growth as they dig up Atlanta to install new internet and TV lines.

PSC Stan Wise called for all interested parties to comment publicly at a Sept. 1 meeting, reacting to what he called "the extraordinary level of digging" over the past year.

Wise said, "I've heard from countless people concerned about the safety and economic disruption that come from the cutting and uprooting of underground facilities. These are clearly issues that surround our Pipeline Safety Act and Georgia Underground Facilities Protection Act (GUFPA)."

As companies like AT&T and Comcast expand, and Google Fiber seeks to make a splash in the market, CBS46 has reported on a number of broken gas lines and water mains that have at times been attributed to the communications companies.

- [City of Atlanta blames Google Fiber crews for water troubles](#)
- [Google Fiber sign-ups beg in in Atlanta neighborhoods](#)

Questions posed to stakeholders

Wise presented a list of questions for the companies and utilities to answer in-person or writing ahead of the Sept. 1 meeting.

1. How many facility damages under our jurisdiction (Georgia Utility Facilities Protection Act) have occurred by contractors working for Google Fiber or U-verse? Can the damages be quantified in dollars?
2. Are utilities being asked to go beyond the locating requirements in GUFPA and provide premium service? If so, at what cost and who pays for that?
3. Are the locating companies able to keep up with demand? If not, why not?
4. What changes in rule, regulation, law or practice need to be made and by whom to safely deploy utility services without burdening our ratepayers?
5. What action, if any, does the Commission need to take at this time?
6. How does the bidding-out process for location services contribute to this problem, i.e. if a utility bids out for a locator and estimates low as to the number of locates it anticipates, then how is the "winner" of that bid expected to cope with the workload if the real number of locates is 150 or 200% of what was estimated?

Wise said he wants a discussion to ensure that work on underground facilities is being done safely and in compliance with the law without slowing down economic development.

Cliff Meidl looks ahead to importance of Pan-Am Championships

May 18, 2016

It's a big weekend for canoers and kayakers as the Pan-American Championships take place at Lake Lanier, which means Olympic spots are up for grabs.

Beginning on Thursday, the championships will determine what racers will represent Team USA. You may remember back in February, WLTZ introduced you to a couple of athletes like Ben Hefner, who will be vying for those coveted spots.

Ahead of this weekend's event, WLTZ got a visit from two-time Olympian Cliff Meidl. He's a kayaker who represented the U.S. back in 1996 and 2000 and says this weekend is extremely important to so many.

"Ben and the other athletes up there have spent a lot of time and have dedicated years to get that spot," Meidl said. "And it's one of those things where there's only gonna be one spot and this is just where you put your life on the line, you got to go as hard as you possibly can go in order to get to that next spot and that next step to get there and everybody is there, everybody's on a mission and a giant family competing for the same spot."

The Pan-American Championships kick off tomorrow and will last all weekend. Ben Hefner, in particular will compete for an Olympic spot on Saturday.

Atlanta Gas Light guidelines for severe weather

By ShaBreah Clark

Published: May 31, 2016, 10:55 am | Updated: May 31, 2016, 11:57 am

AGL Resources®

ATLANTA GA (WSAV) — As hurricane season approaches, Atlanta Gas Light (AGL) prepares a safety guide regarding tropical storms and the aftermath especially in flat areas. Forecasters predict that this hurricane season could be more active than previous years, AGL wants customers to be prepared if and when severe weather strikes.

Gas leaks can be detected by the smell of rotten eggs that is associated with natural gas, and if it is detected never use a phone, light switches, operate appliances or anything that can cause a spark. Be sure to leave the premises and call the 24-hour response at 1-877-427-4321 immediately from a safe location.

With severe weather like hurricanes, tropical storms and depressions this can lead to strong winds and saturated grounds that in turn can cause uprooted trees. Fallen trees can become tangled in gas lines and before removing them call Georgia 811 or 800-282-7411 to have the location of the underground utility lines marked, according to the release. If the gas line is

exposed, leave the area immediately and call the 24-hour emergency response line at 1-877-427-4321 from a safe location.
